

Designing Your Porcine Project

Porcine Tissues for Medical Device, Biologics, Pharmaceuticals, Research & Development, Testing and Education

What are your tissue specifications?

If you have specific Custom Tissue collection requirements (i.e. traceability, preparation protocol, collection time, preservation technique, etc.) it may be difficult to find a provider can that meet all of your criteria. Utilizing a specialized tissue provider such as Tissue Source is your best option for Custom Tissue. If you do not have specific requirements our Basic Tissue will stretch your budget futher, while still being harvested from USDA inspected and passed animals. Tissue Source's knowledgeable staff will analyze your collection needs and provide potential options to maximize your purchase value.

Do you know your animal constraints?

Have you considered breed, age or weight of the animal? If these factors are important to your outcome, make sure to specify an acceptable range for Custom Animal requirements. If not, request Basic Animals for the most cost-effective option. With Basic Animals no infomation is collected and retained other than the animal has been ante and post mortem inspected and passed for human consumption.

How many samples do you require?

How often will you need tissue? Do you require a specific number of samples to be collected over a particular time period? Discounts may be available for contractual recurring orders. Purchase orders may be required before the order can be scheduled.

How quickly do you need the samples?

Prospective collections can be scheduled within ten days if the existing specifications and purchase order are already in place. However, new tissue orders may take some time as clarification of specifications, acquisition of appropriate age/weight animals, and purchase of requested packaging and shipping items may be required. Depending on the complexity of your request, it may take several weeks before your collection can be scheduled. It is always best to inquire early!

Shipping Method:

Tissues are collected and shipped the same day the animal is sacrificed, using overnight commercial delivery. You may also use your own private courier for pick-up and delivery if desired.

Traceability:

Identify the level of animal and tissue traceability requirements you need to ensure consistent outcome and yield. Based on your preferences you may select Custom or Basic options.

Custom Animals - Requirements are tailored to the clients' specific requirements with identifiable information and traceability details.

Basic Animals - Pigs that are ante and post mortem inspected and approved for human consumption. No other information is available, collected or retained.

Custom Tissue - Tissue is collected, processed and shipped according to the clients' tissue requirements.

Basic Tissue - Tissue is collected, processed and shipped as determined by Tissue Source with no traceability to the animal.
